PeeringDB Issues board   **Google Meet**   **PC Todo list**

2022-07-07 Start: 15:30 UTC **End:** 16:30 UTC
Participants: Arnold, Leo, Matt, Martin, Peter, Steve

Agenda
1. Meeting with Amazon on Oauth
2. Organizational Policy issues - designs from 20C
3. Survey questions on user roles
4. New issues in Github

Number	Title	Summary
65	Make spinning up peeringdb-py fully automated	An alternative to CDN deployment
1180	Enforce Session Timeouts	1) Share MFA status via Oauth 2) Shorter session length for Oauth than www.peeringdb.com
1182	Manual IX-F import request queue can get stuck	IXPs without an import URL can trigger imports and when 5 or more do this it stops imports
1185	FAC Object Creation per Policy	Automate the process described in the guidelines (see potential design)
1189	Data export buttons for Network, Exchange, and Facilities	Make all tabular data exportable as CSV or JSON, like Advanced Search results already are
1191	OAuth logins with 2FA don't complete first time	When a user is authenticating to another site via the peeringdb OAuth system, and they are not logged in to PeeringDB already, and they have 2FA enabled, the flow dumps them into the main page after 2FA, and not the OAuth flow.
1198	Add automated testing at the browser level	There currently are no automated tests at the browser level, so changes to the UX require manual review and are time consuming and prone to oversight.
1199	Expose the fac's state field to the ixfac object	Enable search for `fac` objects based on state or province

| 1200 | Drop the ixlan name part from name in the netixlan object | A change for v3 of the API |

5. Other issues

Number	Title	Summary
1128	Improve search for interconnection facilities serving conurbations	Implement support for metro area searches by a well known name, e.g. Chicagoland
