- PeeringDB users are often connected to multiple IXPs and meet at the same events
 - OAuth2 defined in [RFC 6749](https://tools.ietf.org/html/rfc6749) is a third-party authentication framework that lets PeeringDB be an OAuth server
 - Register your application, and let people use their PeeringDB account to login instead of requiring them to register in your application
- Full user control, each PeeringDB user must permit each application to use OAuth
- More details are available here:

 - Security patches were deployed in release 2.8.4 on 2018-05-08
- The auditor concluded there are no more major issues
